About

About Me

Background

I am a Cloud and IAM engineer based in Belgium, focused on building secure, automated infrastructure on Microsoft Azure. My core work revolves around AKS, Terraform, CI/CD with GitHub Actions, and identity platforms like Entra ID and Keycloak.

I come from a Java/Spring Boot backend background, which gives me a practical perspective on how applications actually consume cloud services and authenticate users. I bridge the gap between platform engineering and application security.

I am currently open to remote, hybrid, or freelance opportunities in Azure Cloud Engineering, Platform/DevOps Engineering, or Cloud IAM Engineering.

Certifications

- ⚠ **AZ-104: Azure Administrator Associate**
  Microsoft · Earned 2023 — expired. Renewal planned.
- ⚠ **AZ-400: Azure DevOps Engineer Expert**
  Microsoft · Earned 2023 — expired. Renewal planned.
- ○ **HashiCorp Terraform Associate**
  [PLANNED — Target 2024]

How I Work

Everything I build is infrastructure-as-code. Every lab on this site has a GitHub repo with Terraform, CI/CD pipelines, and documentation. I prefer to learn by building, and I share what I learn openly.

I value security-first design, cost awareness, clear documentation, and honest communication about what I know and what I am still learning.
