Open to remote, hybrid & freelance

Azure Cloud & IAM Engineer

I build secure, cost-efficient cloud platforms on Azure — AKS clusters, Terraform infrastructure, CI/CD pipelines, and identity solutions with Entra ID and Keycloak.

`AKS · Terraform · GitHub Actions · Entra ID · Keycloak · Spring Boot`

Technical Skills

Core competencies across cloud infrastructure, automation, and identity management.

Azure Cloud

AKS Azure Networking App Gateway ACR Key Vault Workload Identity Azure Monitor Entra ID Azure Policy RBAC Management Groups Cost Management

IaC & Automation

Terraform Bicep Azure CLI Python scripting

CI/CD & GitOps

GitHub Actions (OIDC) Azure Pipelines Jenkins ArgoCD Docker

Identity & Backend

Java Spring Boot OAuth2/OIDC Keycloak Entra ID integration

Frontend (supporting)

Angular React Next.js

How I Work

Four principles that guide every project and lab.

Security-first

Every architecture starts with identity, network segmentation, and least-privilege access. Security is not an afterthought.

IaC for everything

If it exists in Azure, it exists in Terraform. No click-ops. Infrastructure is versioned, reviewed, and repeatable.

Documented

Every lab has a README, architecture diagram, and decision log. If it is not documented, it does not exist.

Cost-aware

Cloud costs spiral fast. I track spend from day one with budgets, alerts, and right-sized resources.
